Industry Challenges

Manual Entry

Inspectors **waste >50 hours a month** doing manual data entry

Human Error

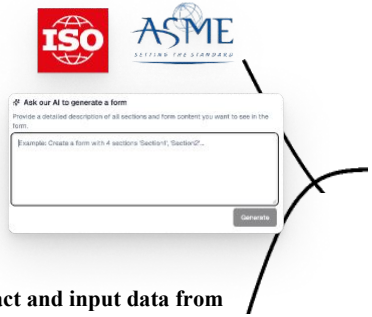
Managers spend hours **checking for reporting errors** every week

Inconsistent Formats

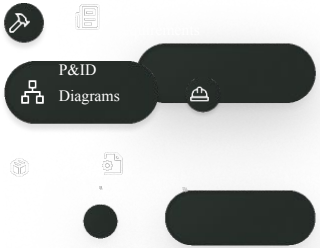
Clients see **inconsistency in the quality and format of reports** across different inspectors

How it works

Create workflows with standards and AI

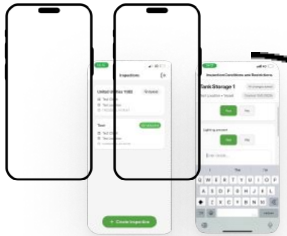


Extract and input data from any source

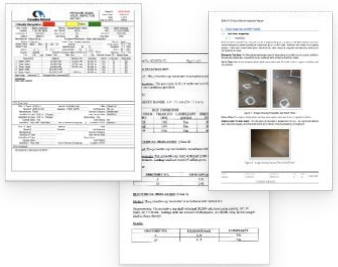


Automated data clean up

Collect and add data in field/labs with speech and video



Digital Delivery of Reports



Automatically Generated Dashboards

SCOPE

Proven Results

- Cut reporting time by 80%
- 2x faster inspections with the same headcount
- Major increase in efficiency

We are established as the leading solution for complex data ingestion and reporting

We're excited to introduce SmartRBI – TÜV Rheinland next-generation Risk-Based Inspection service, co-developed with @scopeinspection.
SmartRBI leverages the power of Artificial Intelligence to take your inspection strategy to the next level, delivering:

- Smarter, data-driven risk assessments
- Enhanced safety and compliance
- Optimised inspection planning
- Real-time insights and predictive analytics

Whether you're in oil & gas, energy or manufacturing, SmartRBI helps you identify and mitigate risks before they escalate - saving time, reducing costs, and protecting people and assets.

Are you ready to future-proof your inspection processes?
Is it time for you to upgrade?

Outcomes post 3 months deployment

Inspectors

+50 hrs

saved per inspector per month, freeing inspectors for other projects and driving efficiency gains

Contract Won

£1.2M

deal secured for a major client through competitive pricing enabled by inspector efficiency

Inspection time

5x

faster delivery of inspection results and risk assessments through automation

Uptime

99.99%

software uptime, without bugs or any other issues - 4 minutes a month
